Biomedical applications. Biodegradable polymers are widely used materials for many biomedical and pharmaceutical applications. They are considered very promising for controlled drug delivery devices. Biodegradable polymers also offer great potential for wound management, orthopaedic devices, dental applications and tissue engineering. Not like non biodegradable polymers, they won't require a second step of a removal from body.

Polymer engineering - Wikipedia

The utilisation of polymers in Geotechnical Engineering (a sub-discipline within civil engineering which covers broadly all forms of soil or the earth s crust related problems) constitutes a major range of applications for these materials. The term geosynthetic has been coined to describe the synthetic polymers, almost exclusively thermoplastics, used for geotechnics problems including environmental geotechnology.
