In a piston engine, the bore (or cylinder bore) is the diameter of each cylinder.. Engine displacement is calculated based on bore, stroke length and the number of cylinders:. displacement = π (1 / 2 × bore) 2 × stroke × n cylinders The stroke ratio, determined by dividing the bore by the stroke, traditionally indicated whether an engine was designed for power at high engine speeds or ...

Bore (engine) - Wikipedia

The term "bore" refers to the diameter of a cylinder in a piston engine. If you're assembling or rebuilding an engine, knowing the bore of each cylinder will allow you to install pistons of an appropriate size to ensure adequate clearance during firing and prevent excess wear or other, more dangerous issues.
