ATTENTION ALL V6 (KV6) MG/ROVER/LANDROVER OWNERS The KV6 engine appears in many guises. The Rover 75 (both 2 & 2.5l engines) the MG ZR, ZS & ZT and the Landrover Freelander all use this engine. The engine uses many plastic components and if worked on by persons not experienced in dealing with this engine, many hundreds of pounds worth of damage

Vauxhall engines are far easier to get a bit more out of, just by using 2 pairs of 3.0 cams will knock a 2.5 up to 200bhp alone. But it's all about breathing with V6's engines. And aslong as the engine can take the extra heat, then the sky is the limit, well your pocket is anyway lol.

i think your car has got the rover kv6 engine and am sure the camshaft timing is incorrect. i worked on these engines and they are 2 different timing tools for the cams depending on the engine. sounds like they have used the incorrect tools on the rear cam belts there is 3 belts on that engine. the 2 at the back have timing positions 1 for 2ltr the other for 2.5ltr the engine control module ...

SOLVED: Camshaft timing diagrafe for k5 kv6 engine - Fixya

It has nothing to do with cam timing!! If you can time a twin cam engine then the KV6 is no different!! The belt tension is controlled by the tensioner in service. As long as the slack is taken out the tensioner side when the belt is fitted, the belt tension will set by the tensioner in the same way as any other engine!!

The KV6 does have a lovely note to it, I like the engine itself, but I'm not keen on bits fitted to it like the inlet manifold, replacing the cambelt, and most importantly, the post 2001 KV6s both ending up in one of the highest VED brackets, something I'm not keen on for a 2.0 engined car.

When I did the timing, I had the engine locked using the locking pin. (I forgot your previous advice shown in this post). The Laser set that I have has two sets of camshaft positioning tools (one for the 2.0 engine and one for the 2.5 KV6). The 2.5 set is offset slightly. The engine starts and runs great.
